Your Fire Alarm or Fire Sprinkler System can make the difference between life and death. Imagine you are at your desk when an unexpected fire suddenly occurs. You rush to the exit, lift up the cover of a pull station, pull down the lever, but none of the fire alarms make a single sound.

Don't wait until you have an emergency, without a thorough Life Safety Inspection and a routine maintenance program, how would you know your building's Life Safety Systems aren't functioning properly.

At HiTech Integrated Solutions we offer 24-hour full emergency Life Safety Services, including Inspections, Tests, Repair, Routine Maintenance, System Upgrades and New Installation to ensure your Life Safety Systems will quickly alert building occupants about a fire emergency.

To learn more about how HiTech can help you, please call your account Rep Today.
